

MAUSOLEUM PROTECTOR™

the **MOST ADVANCED DESIGN** *in* **CASKET ENCLOSURE**

- The MAUSOLEUM PROTECTOR is the most advanced design in casket enclosure.
- The MP utilizes a rigid lower tray constructed of High Density Polyethylene Plastic. The clear upper cover is a co-extruded film with a high barrier to oxygen and aroma transmission. The assembly is protected by a check valve designed to open at 1/10 psi.
- The MP is the easiest enclosure to assemble. With the casket in the tray, unfold the upper cover and pull down over rolled edge of the tray. Position MP clamping rails, install rivets and you are done. Rails now provide mechanical clamp and secure an air tight assembly.
- The MP rail has two compressing legs which eliminate the need for tapes or glues.
- The lower leg has a designed interference fit compressing the bag into the gasket. The upper leg provides a second seal once rivets are installed
